

# Visiting A Patient In An Isolation Room

IH-IV-144  
R.D. 1/06  
Page 1 of 1

The patient you are visiting is in “Isolation”. Isolation is a way to keep germs from spreading from the patient who has them to other people.

- You will **not** need to wear gowns, gloves and/or masks unless:
  - You are visiting more than one patient.
  - You are helping care for the patient.
  - You want to wear them.

- Only 2 visitors during each 8 hour nursing shift, unless the nurse manager or charge nurse allow more visitors.

- It is important that you:
  - Wash your hand for at least 15 seconds with soap and water when you leave the room.
  - Ask the nurse for bed linens, ice or any other supplies you need.
  - Do not touch or get supplies from carts, or go into the kitchen area.

- If you do choose to wear a gown, gloves and/or a mask, you should take them off before you go into public places, such as a waiting room, snack vending area or lobby.

**Thank you for helping to keep germs from spreading!**
